

LDRUG

A training database for learning how to use the DRUG files:

DDFU Derwent Drug File Standard
 DRUGU Derwent Drug File for Subscribers

(See database summary sheet DDFU/DRUGU for details on search and display fields, which are valid in LDRUG).

Subject Coverage	All aspects of drugs: <ul style="list-style-type: none"> • Analysis • Biochemistry • Galenics • Metabolism • Pharmacokinetics • Pharmacology • Structure-activity relationships • Synthesis • Therapeutics and adverse effects • Toxicology 			
File Type	Bibliographic, learning			
Features	Alerts (SDI)	Not available		
	CAS Registry Number® Identifiers	<input checked="" type="checkbox"/>	Page Images	<input type="checkbox"/> STN® AnaVist™ <input type="checkbox"/>
	Keep & Share	<input checked="" type="checkbox"/>	SLART	<input type="checkbox"/> STN Easy® <input type="checkbox"/>
	Learning Database	<input checked="" type="checkbox"/>	Structures	<input type="checkbox"/>
Record Content	Record contain bibliographic information, controlled term indexing, and structure codes (file DRUGU only)			
File Size	500 compounds from the Registry segment and about 15,000 relating literature records			
Coverage	1983-November 1994			
Updates	Closed file			
Language	English			
Database Producer	Clarivate Analytics (UK) Limited Friars House, 160 Black Friars Rd. London SE1 8EZ United Kingdom Copyright Holder: Clarivate Analytics			

Sources	Medical and scientific journals and conference proceedings
User Aids	<ul style="list-style-type: none">• Derwent Drug File Thesaurus *• Journal List and Selection Guidelines *• Product Description *• Work Books *• Online Helps (HELP DIRECTORY lists all help messages available)• STNGUIDE * available from producer
Clusters	<ul style="list-style-type: none">• LEARNING STN Database Clusters information (PDF)
Related Databases	<ul style="list-style-type: none">• DDFU• DRUGU contain data from 1983 to present

 DT Journal
 AB The metabolism of Falimint following p.o. administration to human subjects was studied. Polarographic analysis of the urine showed that most of the drug was eliminated within 6 hr, the main metabolite being falimintic acid (3-(2-acetamido 4-nitrophenoxy) propionic acid). Other metabolites include free and conjugated 2-acetamido-4-nitrophenol (AANP), 2-aminonitrophenol (ANP), 3-(2-amino 4-nitrophenoxy) propionic acid (M7) and 2-amino 4-nitropropoxybenzene (Ultrasweet). Variations in the relative amounts of the metabolites over the test period were discussed.
